

ANNEX 4-A

PRODUCT SPECIFIC RULES OF ORIGIN

Section A: General Interpretative Notes

1. For the purposes of interpreting the product specific rules of origin set out in this Annex:
 - (a) the product specific rule of origin that applies to a subheading is set out immediately adjacent to it;
 - (b) the product specific rule of origin applies to goods in which non-originating materials have been used in the production process, as defined in Article 4.2(c) (Originating Goods).
2. For the purposes of the column on Product Specific Rule (“PSR”) of this Annex:
 - (a) **Change of Chapter (“CC”)** means that non-originating materials must be classified in a different chapter at the (at the 2-digit level) from the classification of the good;
 - (b) **Change in Tariff Heading (“CTH”)** means that non-originating materials must be classified in a different heading (at the 4-digit level) from the classification of the good;
 - (c) **Change in Tariff Subheading (“CTSH”)** means that non-originating materials must be classified in a different subheading (at the 6-digit level) from the classification of the good;
 - (d) **RVC (BD)** means that the good must have a regional value content, determined using the Build-down Method (BD), as calculated under Article 4.4 (Regional Value Content);
 - (e) **RVC (BU/BD)** means that the good must have a regional value content, determined using the Build-up Method (BU) or the Build-down Method (BD), as calculated under Article 4.4 (Regional Value Content); and
 - (f) **RVC (NC)** means that the good must have a net cost, determined using the Net Cost Method, as calculated under Article 4.4 (Regional Value Content) and determined under Article 4.5 (Net Cost).
3. In the case that a good is subject to alternative product specific rules, as set out in the column on PSR, the good shall be originating if it satisfies one of the said alternative product specific rules.
4. A requirement of a change in tariff classification applies only to non-originating materials.

5. If a PSR is defined by a criterion of change in tariff classification that is accompanied by the expression “except”, it shall be construed to mean that the PSR requires the excluded materials to be originating for the good to be originating.

6. If a PSR is defined by a criterion of change in tariff classification with additional requirement that is accompanied by the symbol “+”, it shall be construed to mean that the the good must fulfil both requirements to be originating.

Chapter 27: Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral waxes		

Note 1: For the purposes of this Chapter, a chemical reaction confers origin. A "chemical reaction" is a process (including biochemical process) that results in a molecule with a new structure, by breaking intramolecular bonds and the formation of new intramolecular bonds, or by altering the spatial arrangement of atoms in a molecule.

For the purpose of this definition, it is not considered a chemical reaction:

- (a) dissolving in water or other solvents;**
- (b) the elimination of solvents, including solvent water; or**
- (c) the addition or elimination of the water of crystallisation.**

2709.00	Petroleum oils and oils obtained from bituminous minerals, crude.	CTH

Note 2: For the purposes of heading 27.10, the following processes confer origin:

(a) Atmospheric distillation - Separation process in which petroleum oils are converted, in a distillation tower, into fractions according to the boiling point. Afterwards the vapors are condensed into different liquefied fractions, gas liquefied petroleum, naphtha, gasoline, kerosene, diesel (heating oil), light gas oils, and bases for lubricants are produced by distillation atmospheric oil;

(b) Vacuum distillation - Pressure distillation below atmospheric, but not so low to be considered as molecular distillation. Vacuum distillation is used for distilling heat sensitive materials, with high boiling points, such as heavy distillates contained in petroleum, from which are obtained light and heavy vacuum and waste gas oils. In some refineries, gas oils may be further processed into lubricating oils;

(c) Catalytic hydroprocessing - Cracking and/or treatment of petroleum products with hydrogen at high temperatures and pressure, with the presence of catalysts special. Catalytic hydroprocessing includes cracking with hydrogen and hydrotreating;

(d) Reformed (catalytic reforming) - Consists of the rearrangement of molecules in a boiling range of naphthas to form higher octane aromatics (by example improving the anti-knock quality at the expense of the performance in gasolines). One of the main products is catalytic reforming, used as a component of the gasoline mixture. In this process hydrogen is obtained as a byproduct;

(e) Alkylation - Process by which high-octane gasoline is obtained by the catalytic combination of an isoparaffin and an olefin;

(f) Cracking - Refining process that involves decomposition and molecular recombination of compounds by means of heat, which combine to form more suitable molecules to constitute motor fuels, monomers, etc.;

(g) Coqueo - Thermal cracking process in which heavy residual hydrocarbons of low economic value, such as reduced crude, cracking residue, tar, and shale oil, are converted by high temperature effect, into coal, also obtaining fractions of hydrocarbons of lower temperatures of boiling, which are prepared to be used as inputs for other processing units in the refineries, to finally become products of greater added value; and

(h) Isomerization - Oil refining process in which the hydrocarbons with iso molecular structure in their corresponding isomers.

Note 3: In heading 27.10, "direct blending" means a refining process in the which oil blends from different processing units and components stored in tanks combine to create a finished product, with predetermined parameters, classified in heading 27.10.

Chapter 39: Plastics and articles thereof

Chapter Note: A good classified between headings 39.01 to 39.14, resulting from a reaction chemistry in the territory of one or more of the Parties, shall be considered as an originating good.

A "chemical reaction" is a process (including a biochemical process) that results in a molecule with a new structure, by breaking intramolecular bonds and the formation of new intramolecular bonds, or by altering the spatial arrangement of atoms in a molecule.

The following do not constitute chemical reactions for the purposes of this definition:

- (a) dissolving in water or other solvents;**
- (b) the elimination of solvents, including solvent water; or**
- (c) the addition or elimination of the water of crystallisation.**
